

**Dr. Lepperdinger, Günter**

Principle Investigator and Section Head at the Institute for Biomedical Aging Research of the Austrian Academy of Sciences in Innsbruck, Austria since 2002.

Before working as a basic scientist in biochemistry, molecular biology, developmental biology and regenerative medicine in Salzburg, Munich, and Washington DC, he was trained as a chemist at Vienna University. His present scientific focus is on human mesenchymal stem cells and the corresponding niche with an emphasis to promote human longevity and life-long health. Applied aspects of his work are concerned with inflictions of inflammation in stem cell fitness, and implementation of biosensor technology in medicinal implantology.
